

GSM Gateway "Follow Me"

To redirect the calls from telephone line to GSM

Applications according to direction of calls and settings up:

A: After ringing to telephone line:

1. Model A1 for redirect through GSM:

After ringing through telephone line call is redirect to one number, which is pre-set in gateway. You hear signal –“ringing” over phone line and wait GSM to pick up. If the conversation not starts after 7-8 sec the call can be disconnected.

2. Model A2 with function DISA for telephone exchange:

After ringing through telephone line you can choose one of five numbers from voice menu (for Trade section press 1, for ... pres 2, for... pres 3 etc.) These numbers are pre-set in gateway. When you press digit from 1 to 5 you dial number response to that digit. For that model of gsm gateway the call is taxing at the beginning of voice menu.

Some important notes:

- The call is ending when the GSM hang up.
- The taxing through phone line is at standard prices
- The call between gateway and GSM is for free when the two Sims are in group.

B: After ringing to GSM number in gateway you can:

Model B1- when you take up the phone line your call is redirect to one pre-set number in gateway.

Model B2- when you take up the phone line you hear the line signal and you can dial a number at your choice. You can hear a voice menu too.

Some important notes:

- The call is ending when the GSM hang up;
- Access to the phone line is granted to all numbers or to a list of numbers depending on setting-up of the gateway;
- If the phone you dial to have function CLIP the guy will see your fixed number, in which the gateway is switch on, instead of your GSM number from which you ring.

Technical parameters:

- Standard telephone impedance – 600 ohm;

Important: if your phone line has different parameters from 600 ohm the gateway need to be additionally tune.

- GSM module - 900/1800/1900MHz

In set is included:

- Users manual;
- Software for re- programming;
- External antenna;
- Adapter - 12V/ 600 mA;

- Supported elements for horizontal or vertical standing.

Extras:

- Memory for voice menu – 45 lv;
- Installation and delivery services – 24 lv.

Example:

1. Using in one country:

If an electrician uses his home phone for incoming call, with our service Follow me, which redirect calls to his GSM, and has average 20 min of conversations per day, which means 100 minutes per week or 5200 min per year. With price of 0.50 lv per minute this mean 2600 lv per year. Using GSM Follow Me Gateway and SIM card in group with calls between these cards at 0 lv and pay only monthly tax of these cards which is 70 lv per year and the price of GSM Gateway is 294 lv you will economize 2236 lv at first year and after that you have to pay only taxes for sim cards you use.

2. Using in different countries:

If GSM Gateway Follow Me is connected to VOIP Gateway model FXS PAP2 and another set is put in another country with same connection (in example in Spain) it realize a free connection in two directions - from GSM group in Bulgaria through VOIP by Elexim to GSM group in Spain and vice versa.
